MANAGEMENT OF ECLAMPSIA 1. OPTIMAL OUTCOMES Grady K., Howell C., Cox C. Advanced Life Support Group & Royal College of Obstetricians and Gynaecologists; 2002. Managing Obstetric Emergencies and Trauma. 6.

The Pre-hospital Obstetric Emergency Training (POET) programme provides an introduction to the obstetric patient and the anatomical and physiological changes that occur during pregnancy (including interpretation of patient-held records and rapid assessment of the obstetric patient). It includes clear definitions and describes risk factors, diagnosis and pre-hospital management of significant problems that occur in both early and late pregnancy and the immediate postnatal period. These are all situations that the pre-hospital practitioner may attend. This text and the accompanying integrated on-line and 'hands on' course will help practitioners identify and manage a range of time-critical obstetric emergencies specifically in the pre-hospital setting, and provides a structured examination and assessment technique as an aid to determining what treatment should be provided before transport, as well as when and how urgently transport should be initiated. POET is of relevance to paramedics, ambulance staff, doctors, and nurses working in the emergency pre-hospital setting and to midwives facilitating home births. It will also be of considerable value to medical and nursing practitioners working in Emergency Departments and unscheduled care settings where immediate access to skilled obstetric assistance is not available.

Fully revised and now in full-colour, the new edition of Pre-Obstetric Emergency Training (POET) will help practitioners identify and manage a range of time-critical obstetric emergencies, specifically in the pre-obstetric department setting. Providing structured examination and assessment techniques as an aid to determine what treatment should be provided before transport, this practical manual equips the practitioner with the knowledge necessary to save the mother and fetus in life-threatening circumstances before admission to the hospital. New to the second edition are chapters covering non-technical skills and communication, as well as complicated labour and delivery. Designed to accompany the associated Advanced Life Support Group training course, Pre-Obstetric Emergency Training serves as an authoritative guide for a range of pre-hospital practitioners dealing with specialist situations.

Whether you offer comprehensive pregnancy care in your primary care facility, or provide prenatal and postpartum care, this book delivers the guidance you need to optimize health for both mothers and their babies. It covers all aspects of birth care, from preconception counseling and prenatal care, through labor and delivery (both low-risk and complicated), to postpartum care and the first month of life. The completely revised third edition includes the most up-to-date, evidence-based standards of care. It offers information that is patient centered, prevention oriented, educational, and sensitive to the care of the whole woman and her family. Features a reader-friendly outline/narrative format for ease of use in daily clinical practice. Describes how to care for patients with a wide range of medical conditions during pregnancy as well as pregnancy-related conditions. Takes a whole-family approach to maternity care, with discussions of maternal and paternal adjustment, marital adjustment, sibling adjustment, single-parent families, and return-to-work issues. Provides patient and family education materials on a full range of topics, from nutrition in pregnancy to breastfeeding. Features a section on alternative medicine in maternity care. Provides detailed instruction for a wide array of procedures, including cesarean delivery, perineal repair of simple and complex lacerations, circumcision, assisted deliveries, and amnioinfusion. A continued strong emphasis on evidence-based medicine includes an ongoing summary of Level A recommendations throughout the text. A new chapter summarizes practical applications of how to incorporate continuous quality improvement and enhanced medical safety into the maternity care setting. A new section details which immunizations can be used safely during pregnancy. A section on "Centering Pregnancy" discusses this new model of care and how it incorporates longitudinal group.

The Managing Obstetric Emergencies and Trauma (MOET) course teaches the practical skills and procedures needed to save the mother and fetus in life-threatening circumstances. This accompanying Manual provides readers with a structured preparation and revision system for the course.

Critical care in obstetrics is an upcoming specialty in the developing countries. This book is first of its kind as there are very few books written on this subject with the South East Asian perspective. The book discusses various aspects of critical care in obstetrics starting from the basic principles, physiology, ethics, monitoring and organization of a critical care unit. The various chapters cover management of life-threatening illnesses involving various organ systems of the body of a pregnant woman. Furthermore, the management of a pregnant woman is unique as it involves not only management of the patient but the developing fetus in her womb as well. This book aims to help the obstetricians, postgraduate students and critical care providers with the management protocols in dealing with critically ill pregnant women.

Specialization has driven medical practice over the last century. Expanding knowledge has increased the physician workforce but has decreased the proportion of general family doctors, leaving rural areas with critical physician shortages. In 1978 almost half of family physicians delivered babies. By 2005 this number decreased to 23 percent. Although many recognize the broad medical and surgical skills required in remote Africa, few recognize the need for similar skills among doctors in rural America. These physicians blend family and emergency medicine with specific skills from obstetrics, gynecology, and general surgery. Many family doctors provide extensive women's health services, including cancer screening, prenatal care, and cesarean delivery. This work is written for these physicians. In rural areas, most women cannot leave their communities to have children. Extensive travel for prenatal care and delivery has detrimental economic and social consequences. Although rural counties provide quality care, they cannot afford an array of technicians, nurses, and physicians trained in obstetrics, gynecology, surgery, neonatology, and critical care. Drawing from my mentors' and family's experiences in Texas and Tennessee, I realized that there was no formal ultrasound curriculum for family doctors providing rural obstetrical care. The majority of texts have been written for ultrasound technicians performing examinations and subspecialists interpreting the acquired images. Historically, family physicians have played a prominent role in obstetrical patient safety and care, as seen through the continued success of the Advanced Life Support in Obstetrics (ALSO) curriculum. Although the ALSO course provides valuable training, I argue that a formal program for physician performed obstetrical ultrasound is equally, if not more, important. Ultrasound is the basis for obstetrical risk stratification. Without basic skills, physicians may inadvertently put mothers and children at risk. For example, a physician in west Texas should not trend beta hCG levels over two days when evaluating a suspected ectopic pregnancy. Any suspected threat to pregnancy should be investigated immediately at the point of care to avoid unnecessary delays that may lead to maternal or fetal death. This text serves as a rational but not exhaustive introduction to obstetrical ultrasound for the physician providing women's health services in remote or resource-poor settings. This text distills volumes of information found in advanced obstetrical textbooks as well as recent American and European literature. The referenced articles come from a variety of journals and represent many specialties. Ultimately, we desire to promote patient safety and improve care and welcome any suggestions or ideas that help achieve this goal. Thank you for selecting this text; we hope it serves you and your patients well.
