of the technical and regulatory changes that students and teachers need to know about working safely at heights, on scaffolding and elevated work platforms, and with powder-actuated tools. Construction Skills 2e is designed for easy student learning with end-of-chapter worksheets, explanation and definition of terms, coverage of regulation and codes, real-world examples and practical demonstrations. The author covers core units and important safety areas from Certificate III in Carpentry/Carpentry and Joinery, Certificate III in Plumbing and across the trades. Written to competency units:

- CPCCCM2010: Work safely on scaffolding higher than two metres
- CPCPCM2055A: Work safely on roofs
- CPCCCM2007B: Use explosive power tools
- CPCCCM3001: Operate elevated work platforms up to 11 metres

CPCCCM2008B: Erect and dismantle restricted height scaffolding The bestselling Building Skills series addresses the key competencies of the Certificate III in Carpentry. Series titles are built for learning with colour photographs and illustrations, online tools, and concepts explored in context to help student understanding. Work Health and Safety (WHS) icons identify critical points for concern and student activities help them apply the knowledge and skills. The Worksheets at the end of each chapter are a resource for teachers and trainers to provide formative assessment and feedback on learner progression.

This book systematically describes advanced metric wave radar and its practical applications, offering a comprehensive introduction to the engineering design methods from the perspectives of system design, antenna/feed and transmit/receive subsystems, as well as mechanical structure design. Focusing on the height-finding method, it describes in detail how the super-resolution technique can be used to solve the problem of low-angle height finding in metric wave radar. It also discusses the anti-jamming method for the unique jamming environment. Further, it presents narrowband

target recognition methods to overcome the limitations of narrow absolute bandwidth in metric wave radar and to further explore the technique's potential. Cooperative detection for metric wave radar netting is also addressed, and the main experimental results are included. The book offers a valuable resource for professional engineers, researchers and teachers, as well as graduate students engaged in radar system engineering, electronic engineering, and signal processing.

MEDER 2018, the IFToMM International Symposium on Mechanism Design for Robotics, was the fourth event in a series that was started in 2010 as a specific conference activity on mechanisms for robots. The aim of the MEDER Symposium is to bring researchers, industry professionals, and students together from a broad range of disciplines dealing with mechanisms for robots, in an intimate, collegial, and stimulating environment. In the 2018 MEDER event, we received significant attention regarding this initiative, as can be seen by the fact that the Proceedings contain contributions

by authors from all around the world. The Proceedings of the MEDER 2018 Symposium have been published within the Springer book series on MMS, and the book contains 52 papers that have been selected after review for oral presentation. These papers cover several aspects of the wide field of robotics dealing with mechanism aspects in theory, design, numerical evaluations, and applications. This Special Issue of Robotics

(https://www.mdpi.com/journal/robotics/special_issues/MDR) has been obtained as a result of a second review process and selection, but all the papers that have been accepted for MEDER 2018 are of very good quality with interesting contents that are suitable for journal publication, and the selection process has been difficult.
