How the Pandemic Changed How We Feel When We Feel Left Out

From Oscar-nominated features to lesser-known indie gems, Hulu ' s choice of cinema is simply unbeatable. Encompassing every genre, era, and walk of life, there are movies for everyone. Every week ...

Religion and Ecology

The moral values and interpretive systems of religions are crucially involved in how people imagine the challenges of sustainability and how societies mobilize to enhance ecosystem resilience and human well-being. The Routledge Handbook of Religion and Ecology

provides the most comprehensive and authoritative overview of the field. It encourages both appreciative and critical angles regarding religious traditions, communities, attitude, and practices. It presents contrasting ways of thinking about "religion" and about "ecology" and about ways of connecting the two terms. Written by a team of leading international experts, the Handbook discusses dynamics of change within religious traditions as well as their roles in responding to global challenges such as climate change, water, conservation, food and population. It explores the interpretations of indigenous traditions regarding modern environmental problems drawing on such concepts as lifeway and indigenous knowledge. This volume uniquely intersects the field of religion and ecology with new directions within the humanities and the sciences. This interdisciplinary volume is an essential reference for scholars and students across the social sciences and humanities and for all those looking to understand the significance of religion in environmental studies and policy.

The field of religion and ecology is an emerging and growing movement that is becoming relevant and influential in the world. It seeks to analyse, encourage, inspire, use, compare, and combine religious traditions to engage and shape environmental issues. Tony Watling seeks to ethnographically analyse this important field and its expressions. In particular, he analyses and compares its explorations of different world religions for ecological themes and the resulting expressions of ecological visions, in what he terms 'religious ecotopias' - idealized, environmentally-friendly re-imaginings of nature and humanity, and correspondingly religion, which seek to influence environmental attitudes.

Making Peace In and With the World: The G ü len Movement and Eco-Justice is a representative study and working analysis of contemporary Islamic thought on eco-justice. It cuts through problems facing humanity today, ranging from inequality and violence in the smaller globalized world to " the end/death of nature " as signaled by various environmental and ecological crises. Addressing these problems, this volume sheds light on two dimensions of peace in the earth community – making peace between differing human communities, and making peace between humanity and nature. The phrase Eco-Justice in this volume signifies this dual reality, thereby offering a unique and insightful view that justice in the world must go hand in hand with ecological justice if " peace " is to be made. With its dual foci of peace, this volume contributes to multi-disciplinary academic areas. It adds to a burgeoning field of religious ecology, by exploring the dynamics at play in the interaction between religion, human communities and nature, and by providing natural scientific works with considerable theoretical, philosophical and ethical implications. This volume also corresponds to studies in the interdisciplinary field of " war and peace. " Since it deals centrally with the question of religion and eco-justice, this volume challenges assumptions of exclusivist religion, religion-oriented violence and the religion-based " Clash of Civilizations. " The contributors of this volume from diverse academic backgrounds take G ü len and the G ü len movement as the case study. Muhammed Fethullah G ü len is one of the most significant Islamic theologians in the contemporary world, and his inspired G ü len movement is the fastest growing Islamic civic movement worldwide. This volume provides a key reference to studies in G ü len and his movement for new discussions and criticisms. And, by taking this figure and his movement as a case, it reveals a new dimension of peace among differing human communities and between humanity and nature.

Covering three broader issues - biodiversity conservation, religious doctrine and environment - the book Biodiversity Conservation Ethics in Major Religions is the result of a unique approach. It attempts to initiate scientific discourse through the fabric of religions. Spread across 15 chapters, the book covers the essence of 10 religions on biodiversity, encompassing a wide range of issues related to conservation. The book promises to be a useful resource for biodiversity students, researchers and protected area managers and also for religious scholars who are invited to look at the broader themes of religions beyond theology.

Religious ideas, practices, discourses, institutions, and social expressions are in constant flux. This volume addresses the internal and external dynamics, interactions between individuals, religious communities, and local as well as global society. The contributions concentrate on four areas: 1. Contemporary religion in the public sphere: The Tactics of (In)visibility among Religious Communities in Europe; Religion Intersecting De-nationalization and Re-nationalization in Post-Apartheid South Africa; 2. Religious transformations: Forms of Religious Communities in Global Society; Political Contributions of Ancestral Cosmologies and the Decolonization of Religious Beliefs; Esoteric Tradition as Poetic Invention; 3. Focus on the individual: Religion and Life Trajectories of Islamists; Angels, Animals and Religious Change in Antiquity and Today; Gaining Access to the Radically Unfamiliar in Today ' s Religion; Religion between Individuals and Collectives; 4. Narrating religion: Entangled Knowledge Cultures and the Creation of Religions in Mongolia and Europe; Global Intellectual History and the Dynamics of Religion; On Representing Judaism.

This book proposes an applied epistemological framework for investigating science, social cognition and religious thinking based on inferential patterns that recur in the different domains. It presents human rationality as a tool that allows us to make sense of our (physical or social) surroundings. It shows that the resulting cognitive activity produces a broad spectrum of outputs, such as scientific models and experimentation, gossip and social networks, but also ancient and contemporary deities. The book consists of three parts, the first of which addresses scientific modeling and experimentation, and their application to the analysis of scientific rationality. Thus, this part continues the tradition of eco-cognitive epistemology and abduction studies. The second part deals with the relationship between social cognition and cognitive niche construction, i.e. the evolutionarily relevant externalization of knowledge onto the environment, while the third part focuses on what is commonly defined as " irrational " , thus being in a way dialectically opposed to the first part. Here, the author demonstrates that the " irrational " can be analyzed by applying the same epistemological approach used to study scientific rationality and social cognition; also in this case, we see the emergence of patterns of rationality that regulate the relationships between agents and their environment. All in all, the book offers a coherent and unitary account of human rationality, providing a basis for new conceptual connections and theoretical speculations.

From the Psalms in the Bible to the sacred rivers in Hinduism, the natural world has been integral to the world ' s religions. John Grim and Mary Evelyn Tucker contend that today ' s growing environmental challenges make the relationship ever more vital. This primer explores the history of religious traditions and the environment, illustrating how religious teachings and practices both promoted and at times subverted sustainability. Subsequent chapters examine the emergence of religious ecology, as views of nature changed in religious traditions and the ecological sciences. Yet the authors argue that religion and ecology are not the province of institutions or disciplines alone. They describe four fundamental aspects of religious life: orienting, grounding, nurturing, and transforming. Readers then see how these phenomena are experienced in a Native American religion, Orthodox Christianity, Confucianism, and Hinduism. Ultimately, Grim and Tucker argue that the engagement of religious communities is necessary if humanity is to sustain itself and the planet. Students of environmental ethics, theology and ecology, world religions, and environmental studies will receive a solid grounding in the burgeoning field of religious ecology.

Since its publication in 1979, this classic exposition of how society evolves has commanded the attention of both readers and reviewers. In 1981 a new paperback edition was printed, in order to make the book more widely available. '...the book is an astonishing triumph. For those of us who find something lacking in the narrow precision of our professional work, merely to undertake a synthesis of such breadth is an act of considerable courage. To have succeeded to the extent that Boulding has is an achievement on a scale difficult to contemplate.' -- Contemporary Psychology, September 1979 'Boulding's masterwork is full of wise and provocative insights into an amazing range of phenomena. It is one of those b

Religion: Material Dynamics is a lively resource for thinking about religious materiality and the material study of religion. Deconstructing and reconstructing religion as material categories, social formations, and mobile circulations, the book explores the making, ordering, and circulating of religious things. The book is divided into three sections: Part One revitalizes basic categories—animism and sacred, space and time—by situating them in their material production and testing their analytical viability. Part Two examines religious formations as configurations of power that operate in material cultures and cultural economies and are most clearly shown in the power relations of colonialism and imperialism. Part Three explores the material dynamics of circulation through case studies of religious mobility, change, and diffusion as intimate as the body and as vast as the oceans. Each chapter offers insightful orientations and surprising possibilities for studying material religion. Exploring the material dynamics of religion from poetics to politics, David Chidester provides an entry into the study of material religion that will be welcomed by students and specialists in religious studies, anthropology, and history.
