Organizations are facing an
engagement crisis. Regardless if they
are customers, employees, patients,
students, citizens, stakeholders,
organizations struggle to meaningfully
engage their key constituent groups
who have a precious and limited
resource: their time. Not surprisingly,
these stakeholders have developed

deflector shields to protect themselves. Only a privileged few organizations are allowed to penetrate the shield, and even less will meaningfully engage. To penetrate the shield, and engage the audience, organizations need an edge. Gamification has emerged as a way to gain that edge and organizations are beginning to see it as a key tool in their digital engagement strategy. While gamification has tremendous potential to break through, most companies will get it wrong. Gartner predicts that by 2014, 80% of current gamified applications will fail to meet business objectives primarily due to poor design. As a trend, gamification is at the peak of the hype cycle; it has been oversold and it is broadly misunderstood. We are heading for the inevitable fall. Too many

Organizations have been led to believe that gamification is a magic elixir for indoctrinating the masses and manipulating them to do their bidding. These organizations are mistaking people for puppets, and these transparently cynical efforts are doomed to fail. This book goes beyond the hype and focuses on the 20% that are getting it right. We have spoken to hundreds of leaders in organizations around the world about their gamification strategies and we have seen some spectacular successes. The book examines some of these successes and identifies the common characteristics of these initiatives to define the solution space for success. It is a guide written for leaders of gamification initiatives to help them avoid the pitfalls and employ the best practices, to ensure they join the 20%

that gets it right. Gamify shows gamification in action: as a powerful approach to engaging and motivating people to achieving their goals, while at the same time achieving organizational objectives. It can be used to motivate people to change behaviors, develop skills, and drive innovation. The sweet spot for gamification objectives is the space where the business objectives and player objectives are aligned. Like two sides of the same coin, player and business goals may outwardly appear different, but they are often the same thing, expressed different ways. The key to gamification success is to engage people on an emotional level and motivating them to achieve their goals.

accelerate, with the expectation that it ' ll be considered ' mainstream ' in the next 5 – 10 years. It ' ll change the way we as individuals interact with data and systems—and the way we run our businesses. Cognitive Analysis and AI prepares business users for the era of cognitive analytics / artificial intelligence. Building on established texts and commentary, it specifically prepares you in terms of expectation, impact on personal roles, and responsibilities. It focuses on the specific impact on key industries (retail, financial services, utilities and media) and also on key professions (such as accounting, operational management, supply chain and risk management). Shows you how users interact with the system in natural language Explains how cognitive analysis/AI can source

Business process management (BPM), business intelligence (BI) and enterprise resource planning (ERP) systems. Besides the scientific community the event also addresses businesses developing, implementing and intensively using enterprise information systems. To master the challenges of enterprise information systems comprehensively, the ERP Future 2013 Research conference accepted contributions with a business as well as an IT focus to consider enterprise information systems from various viewpoints. This combination of business and IT aspects is a unique characteristic of the conference that resulted in several valuable contributions with high theoretical as well as practical impact.
