"Gail Gibbons is known for her ability to bring the nonfiction world into focus for young students. Through pictures, captions, and text, this book provides a window into the world of growing things...Erin Mallon complements Gibbons's text with a clear, clipped, and purposeful narration." -AudioFile Magazine

Shows the parts of a plant in an easy-to-read text that incorporates phonics instruction.

Life Science for grades 5 to 8 is designed to aid in the review and practice of life science topics. Life Science covers topics such as classifying animals, plant and animal structures, life cycles, biomes, and energy transfer. The book includes realistic diagrams and engaging activities to support practice in all areas of life science. --The 100+ Series science books span grades 5 to 12. The activities in each book reinforce essential science skill practice in the areas of life science, physical science, and Earth science. The books include engaging, grade-appropriate activities and clear thumbnail answer keys. Each book has 128 pages and 100 pages (or more) of reproducible content to help students review and reinforce essential skills in individual science topics. The series is aligned to current science standards.

The Plants in action unit is an ideal way to link science with literacy in the classroom. Students' beliefs about flowering plants will be challenged as they work through hands-on activities.

Presents, for the first time in one volume, a concise treatment of labeling in the chemical industry. This handbook has been designed to provide an in-depth review of, and to act as a source for, the major elements of a hazardous label communication programto serve the needs of labor, industry, and the public.

Ron DiPippo, Professor Emeritus at the University of Massachusetts Dartmouth, is a world-regarded geothermal expert. This single resource covers all aspects of the utilization of geothermal energy for power generation from fundamental scientific and engineering principles. The thermodynamic basis for the design of geothermal power plants is at the heart of the book and readers are clearly guided on the process of designing and analysing the key types of geothermal energy conversion systems. Its practical emphasis is enhanced by the use of case studies from real plants that increase the reader's understanding of geothermal energy conversion and provide a unique compilation of hard-to-obtain data and experience. An important new chapter covers Environmental Impact and Abatement Technologies, including gaseous and solid emissions; water, noise and thermal pollutions; land usage; disturbance of natural hydrothermal manifestations, habitats and vegetation; minimisation of CO2 emissions and environmental impact assessment. The book is illustrated with over 240 photographs and drawings. Nine chapters include practice problems, with solutions, which enable the book to be used as a course text. Also includes a definitive worldwide compilation of every geothermal power plant that has operated, unit by unit, plus a concise primer on the applicable thermodynamics. * Engineering principles are at the heart of the book, with complete coverage of the thermodynamic basis for the design of geothermal power systems * Practical applications are backed up by an extensive selection of case studies that show how geothermal energy conversion systems have been designed, applied and exploited in practice * World renowned geothermal expert DiPippo has including a new chapter on Environmental Impact and Abatement Technology in this new edition

Join the tiny seed on an adventure as it becomes a giant flower!

This book explores the risks and benefits of crops that are genetically modified for pest resistance, the urgency of establishing an appropriate regulatory framework for these products, and the importance of public understanding of the issues. The committee critically reviews federal policies toward transgenic products, the 1986 coordinated framework among the key federal agencies in the field, and rules proposed by the Environmental Protection Agency for regulation of plant pesticides. This book provides detailed analyses of: Mechanisms and results of genetic engineering compared to conventional breeding for pest resistance. Review of scientific issues associated with transgenic pest-protected plants, such as allergenicity, impact on nontarget plants, evolution of the pest species, and other concerns. Overview of regulatory framework and its use of scientific information with suggestions for improvements.

Individual Big Book

In this magically illustrated bedtime story, little Sofia befriends the Moon and sets off on a dreamy adventure to visit her friend. She sees our planet from the Moon's point of view and is inspired to protect the Earth, and encourage others to do th
