This book addresses one of the most exciting and innovative developments within higher education: the rise in prominence of the creative arts and the accelerating recognition that creative practice is a form of research. The book considers how creative practice can lead to research insights through what is often known as practice-led research. But unlike other books on practice-led research, it balances this with discussion of how research can impact positively on creative practice through research-led practice. The editors posit an iterative and web-like relationship between practice and research. Essays within the book cover a wide range of disciplines including creative writing, dance, music, theatre, film and new media, and the contributors are from the UK, US, Canada and Australia. The subject is approached from numerous angles: the authors discuss methodologies of practice-led research and research-led practice, their own creative work as a form of research, research training for creative practitioners, and the politics and histories of practice-led research and research-led practice within the university. The book will be invaluable for creative practitioners, researchers, students in the creative arts and university leaders. Key Features\*The first book to document, conceptualise and analyse practice-led research in the creative arts and to balance it with research-led practice\*Written by highly qualified academics and practitioners across the creative arts and sciences \*Brings together empirical, cultural and creative approaches\*Presents illuminating case histories of creative work and practice-led research

Practice-Based Design Research provides a companion to masters and PhD programs in design research through practice. The contributors address a range of models and approaches to practice-based research, consider relationships between industry and academia, researchers and designers, discuss initiatives to support students and faculty during the research process, and explore how students' experiences of undertaking practice-based research has impacted their future design and research practice. The text is illustrated throughout with case study examples by authors who have set up, taught or undertaken practice-based design research, in a range of national and institutional contexts.

The Routledge Handbook of Social Work Practice Research is the first international handbook to focus on practice research for social work. Bringing together leading scholars in the field from Europe, the USA and the Asia Pacific region, it provides an up-to-the minute overview of the latest thinking in practice research whilst also providing practical advice on how to undertake practice research in the field. It is divided into five sections: State of the art Methodologies Pedagogies Applications Expanding the frontiers The range of topics discussed will enhance student

development as well as increase the capacity of practitioners to conduct research; develop coordinating and leadership roles; and liaise with multiple stakeholders who will strengthen the context base for practice research. As such, this handbook will be essential reading for all social work students, practitioners and academics as well as those working in other health and social care settings.

Aimed at students and educators across all levels of Higher Education, this agenda-setting book defines what screen production research is and looks like—and by doing so celebrates creative practice as an important pursuit in the contemporary academic landscape. Drawing on the work of international experts as well as case studies from a range of forms and genres—including screenwriting, fiction filmmaking, documentary production and mobile media practice—the book is an essential guide for those interested in the rich relationship between theory and practice. It provides theories, models, tools and best practice examples that students and researchers can follow and expand upon in their own screen production projects.

At the performance turn, this book takes a fresh 'how to' approach to Practice as Research, arguing that old prejudices should be abandoned and a PaR methodology fully accepted in the academy. Nelson and his contributors address the questions students, professional practitioner-researchers, regulators and examiners have posed in this domain.

The number of practice-based or practice-led doctorate programs continues to grow across the U.S. Doctoral students who seek a terminal practitioner doctorate typically conduct practice-based research within the dissertation research used as the culmination of the degree program. These terminally degreed graduates return to educational practice to improve practice, impact innovation, and solve the complex problems of practice through research-based decision making. Practice-Based and Practice-Led Research for Dissertation Development provides the most current research, innovation, and insights into practice-based research conducted within U.S. practitioner doctorate programs across fields that include management, education, computer science, health sciences, and social and behavioral sciences. The book illustrates the latest uses of practitioner research and highlights current findings for the dissemination and use of practice-based and practice-led research within these settings. Covering topics that include self-inquiry methods, action research, and high-impact writing support, this book is an ideal reference source for doctoral scholars, doctoral research supervisors, faculty, program deans, higher education leadership, and doctorate program developers.

Designs and Methods for Youth-Led Research provides a foundation from which to plan and implement social research and program evaluation projects that place youth in central roles. In this text, author Melvin Delgado emphasizes how youth-led research represents a profound political and social statement about making relevant research result in significant changes to programs in the field of youth services.

Knowings and Knots presents a range of interdisciplinary perspectives on the methodology of research-creation and asks how those who make knowledge think about and value it. Not just a method but a site of ongoing experimentation around

What counts as knowledge, research-creation is a meeting place of academia, artistic creation, and the wider public. The contributors argue that academic institutions and funders must recognize research-creation as innovative knowledge-making that leaps over the traditional splitting of theory from practice while considering how gender/feminist studies, Indigenous practices, and new materialism might inform and develop the conversation. Through this book, readers can transform the way they experience both art and education.

Contributors: Carolina Cambre, Owen Chapman, Paul Couillard, T.L. Cowan, John Cussans, Randy Lee Cutler, Petra Hroch, Rachelle Viader Knowles, Natalie Loveless, Glen Lowry, Erin Manning, Sourayan Mookerjea, Natasha Myers, Simon Pope, Stephanie Springgay, Sarah E. Truman

Visualizing Research guides postgraduate students in art and design through the development and implementation of a research project, using the metaphor of a 'journey of exploration'. For use with a formal programme of study, from masters to doctoral level, the book derives from the creative relationship between research, practice and teaching in art and design. It extends generic research processes into practice-based approaches more relevant to artists and designers, introducing wherever possible visual, interactive and collaborative methods. The Introduction and Chapter 1 'Planning the Journey' define the concept and value of 'practice-based' formal research, tracking the debate around its development and explaining key concepts and terminology. 'Mapping the Terrain' then describes methods of contextualizing research in art and design (the contextual review, using reference material); 'Locating Your Position' and 'Crossing the Terrain' guide the reader through the stages of identifying an appropriate research question and methodological approach, writing the proposal and managing research information. Methods of evaluation and analysis are explored, and of strategies for reporting and communicating research findings are suggested. Appendices and a glossary are also included. Visualizing Research draws on the experience of researchers in different contexts and includes case studies of real projects. Although written primarily for postgraduate students, research supervisors, managers and academic staff in art and design and related areas, such as architecture and media studies, will find this a valuable research reference. An accompanying website [www.visualizingresearch.info](http://www.visualizingresearch.info) includes multimedia and other resources that complement the book.
