Ecosystem Services: Global Issues, Local Practices covers scientific input, socioeconomic considerations, and governance issues on ecosystem services. This book provides hands-on transdisciplinary reflections by administrators and sector representatives involved in the ecosystem service community. Ecosystem Services develops shared approaches and scientific methods to achieve knowledge-based sustainable planning and management of ecosystem services. Professionals engaged in ecosystem service implementation have two options:

Services based on tools and research in larger territories as well as on local scales

Resource-management decisions, especially in the area of protecting and maintaining biodiversity, are usually incremental, limited in time by the ability to forecast conditions and human needs, and the result of tradeoffs between conservation and other management goals. The individual decisions may not have a major effect but can have a cumulative major effect. Perspectives on Biodiversity reviews current understanding of the value of biodiversity and the methods that are useful in assessing that value in particular circumstances. It recommends

and details a list of components- including diversity of species, genetic variability within and among species, distribution of species across the ecosystem, the aesthetic satisfaction derived from diversity, and the duty to preserve and protect biodiversity. The book also recommends that more information about the role of biodiversity in sustaining natural resources be gathered and summarized in ways useful to managers. Acknowledging that decisions about biodiversity are necessarily qualitative and change over time because of the nonmarket nature of so many of the values, the committee recommends periodic reviews of management decisions.

Human well-being relies critically on ecosystem services provided by nature. Examples include water and air quality regulation, nutrient cycling and decomposition, plant pollination and flood control, all of which are dependent on biodiversity. They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system, so their loss is often not detected and continues unaddressed and unabated. This in turn not only impacts human well-being, but also seriously undermines the sustainability of the economic system. It is against this background that TEEB: The Economics of Ecosystems and Biodiversity project was set up in

2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues. This book, written by a team of international experts, represents the scientific state of the art, providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity, and showing how these can be mainstreamed into public policies. This volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive forward the biodiversity conservation agenda for the next decade.

for?" The book is directed at the prevalence of instrumentalist thinking in the current economy and responds to the calls for another economy. Another economy demands another economics. The value based approach is another economics; it focuses on values and on the most important goods such as families, homes, communities, knowledge, and art. It places economic processes in their cultural context. What does it take to do the right thing, as a person, as an organization, as a society? What is the good to strive for? This book gives directions for the answers. The value based approach restores the ancient idea that quality of life and of society is what the

Economy is all about. It advocates shifting the focus from quantities ("how much?") to qualities ("what is important?").

With its celebrated World Heritage List, UNESCO steers the global heritage agenda through the definition and redefinition of what constitutes heritage and by offering the highest-level forum for heritage professionalism.

While it is the national governments that nominate sites for inclusion in the World Heritage List, and the intergovernmental World Heritage Committee that makes the final decision on inclusion or non-inclusion, it is the International Council on Monuments and Sites (ICOMOS) for cultural heritage that

Read Free Socio Cultural And Economic Valuation Of

determines whether the necessary level of 'outstanding universal value' is met. Focusing on the discourses of ICOMOS and their transmission to the local context, this book is the first in-depth historical analysis of the construction of heritage value in the context of cities illustrated through a case study of Old Rauma in Finland. The book contributes to the understanding of the discursive and constructed nature of World Heritage values as opposed to intrinsic values, critically scrutinizes the role of ICOMOS in making valuations concerning urban heritage, and sheds light on the interactions and tensions of universal and local (urban) perspectives in the practice of heritage valuation.

Free by [Free by](#) perspectives such as tourism, event management, corporate marketing, or customer satisfaction. However, there exist a number of discourses on value and evaluation that have not yet received adequate attention, including the justification of governmental intervention and the costs and benefits of hosting major events. This edited book, written by an international group of academics with expertise in the relevant fields of events, tourism, sport and culture, offers new insight into events and their relationship to sustainability, social responsibility, cultural and social value. Fostering debate in the context of conceptual thinking, philosophising, multiple stakeholder perspectives and

Read Free Socio Cultural And Economic Valuation Of

Interdisciplinary approaches, it challenges the events industry, students, policy-makers and strategists with new perspectives on value, with implications for impact forecasting and assessment. This is a book for all students pursuing degrees in fields where planned events are important topics, while being of great interest to researchers, policy-makers, evaluators and organisers/managers of planned events. Within a subject in need of further attention, The Value of Events offers the most comprehensive overview of event value to date.

scenarios incorporating the Zone 1a areas. The socio-economic assessment was conducted using a combination of in-person interviews with community members in Inuvik, Aklavik and Tuktoyaktuk, telephone discussions, primarily with government officials and industry representatives, and a literature review of published reports, statistical documents, industry studies and websites. The interviews with hunters, trappers, elders and community members were particularly instrumental in describing the history of the beluga harvest and its social and cultural significance. The economic valuation focused on describing marketed and non-marketed direct use values; those

Ecology system actually involving current or recent physical use of the AOI by humans. The economic evaluation provides an indication of the extent of the 'values at risk' given a prohibition or elimination of specific uses. ... (Au)"--ASTIS [online] bibliography.

In an increasingly globalised world, economic and cultural imperatives can be seen as two of the most powerful forces shaping human behaviour. This book considers the relationship between economics and culture both as areas of intellectual discourse, and as systems of societal organisation. Adopting a broad definition of culture, it explores the economic dimensions of culture, and the

Ecological context of economics.

The book is built on a foundation of value theory, developing the twin notions of economic and cultural value as underlying principles for integrating the two fields. Ideas of cultural capital and sustainability are discussed, especially as means of analysing the particular problems of cultural heritage, drawing parallels with the treatment of natural capital in ecological economics. The book goes on to discuss the economics of creativity in the production of cultural goods and services; culture in economic development; the cultural industries; and cultural policy.

While biodiversity loss is an ecological phenomenon, it also

Read Free Socio Cultural And Economic Valuation Of

Ecology has further dimensions - political, social and, last but not least, economic. From the economic perspective, the rapid loss of biological diversity can be viewed in two ways. First, the consequence of this deterioration process is a loss of options and an increase in scarcity of the environmental 'good', biodiversity. Second, economic activity and the structure of global and local economic institutions have frequently been identified as the major drivers of biodiversity loss. In economic terms, this constitutes a market failure - market-based economic activities lead to processes which undermine the long-term stability of these very activities. This book provides an ecological economic

Read Free Socio Cultural And Economic Valuation Of

Free system perspective on the value of diversity in ecosystems.

Combining insights from various sub-disciplines of ecology and environmental/ecological economics, the author constructs a conceptual framework which identifies the ways in which biodiversity influences human well-being and offers a novel, unifying perspective on the economic value of biodiversity. This framework demonstrates that biodiversity's economic value mainly results from uncertainty about the future, regarding both supply of and demand for ecosystem services, and interconnections between ecosystems. The book goes on to identify suitable methods for economic valuation of biodiversity

Read Free Socio Cultural And Economic Valuation Of

and discusses the currently underdeveloped and underused approach of deliberative monetary valuation. Combining a strong theoretical framework with practical examples, this book will be of great interest to students and researchers of ecological economics, ecosystem services, environmental values and environmental and resource economics.
