Although institutions of higher education have recognized the need for preparing their graduates for a digitalized, global workplace, these efforts have been sporadic, individualized, and varied from discipline to discipline. Nevertheless, over the past 10 years, trends such as “double classrooms,” “inverted classrooms,” and “collaborative online international learning” (COIL) have gained traction at universities across the globe. With the emergence of the COVID-19 pandemic in 2020, efforts to engage students in the use of digital tools and virtual collaborative teamwork increased tenfold. Creative and innovative virtual learning environments (VLEs) have emerged, and instructors have used them to connect with their students much more frequently. The holistic nature of virtual learning, its impact on employability, and the development of global citizenry have become prime areas of research amongst the digital education landscape. Now more than ever, it is essential to look at virtual learning environments and how they can be used to prepare students and employees for the opportunities and challenges of a global, digital workplace. Developments in Virtual Learning Environments and the Global Workplace provides readers with a rationale and tool kit for facilitating virtual learning in a wide variety of contexts in response to the opportunities and challenges presented by the digital global workplace. This book covers virtual learning practices, the value of virtual learning for professionals and employers, and the best practices in online learning in different settings. Additionally, the chapters dive into the future perspectives and trends within virtual learning environments and the creation/evaluation of virtual learning strategies. These insights range from diverse countries, education levels, industry sectors, and academic disciplines, making this book a comprehensive research tool. This book will greatly benefit e-learning and instructional designers, university senior managers, university staff responsible for mobility and exchange, researchers, professionals responsible for organizational development and further education, human resource directors, global company executives, managers, practitioners, stakeholders, academicians, and students looking for information on how virtual learning environments are preparing students for the global workplace.

By attending to the adult learning that takes place through more collaborative approaches to leadership, this volume draws upon scholars who understand leadership as more participatory, transformative, generative, and democratic. Looking beyond position-based individual leadership it captures how adults learn through the diverse actions, processes, and strategies collaborative leaders employ to bring about change. Drawing from scholarship and practice, this sourcebook weaves theory with the authors experiences by showcasing real-life examples of collaborative leadership in a variety of contexts including community, healthcare, secondary, and post-secondary education. It also provides a range of creative strategiessuch as playbuilding, coaching, fostering global partnerships, and ensemble leaderships well as indigenous and feminist perspectives on leadership. This sourcebook will support adult educators seeking to promote learning through more collaborative approaches to leadership and engagement in a variety of settings. Readers will benefit by deepening their understanding of how leadership is not only enacted among individuals, but how it is also expressed in collective ways of thinking, doing, being, knowing, and learning. This is the 156th volume of the Jossey Bass series New Directions for Adult and Continuing Education. Noted for its depth of coverage, it explores issues of common interest to instructors, administrators, counselors, and policymakers in a broad range of education settings, such as colleges and universities, extension programs, businesses, libraries, and museums.

Bringing the lessons of Mister Rogers into the digital age Playful and practical, When You Wonder, You're Learning introduces a new generation of families to the lessons of Mister Rogers' Neighborhood. By exploring the science behind the iconic television program, the book reveals what Fred Rogers called the “tools for learning”: skills and mindsets that scientists now consider essential. These tools—curiosity, creativity, collaboration, and more—have been shown to boost everything from academic learning to children's well-being, and they benefit kids of every background and age. They cost next to nothing to develop, and they hinge on the very things that make life worthwhile: self-acceptance; close, loving relationships; and a deep regard for one's neighbor. When You Wonder, You're Learning shows parents and educators the many ways they might follow in Rogers' footsteps, sharing his “tools for learning” with digital-age kids. With insights from thinkers, scientists, and teachers—many of whom worked with Rogers himself—the book is an essential exploration into how kids and their parents can excel at what Rogers taught best: being human.

“This important book offers organizations the keys to introvert inclusion.” —Susan Cain, New York Times bestselling author of Quiet Influence The first guide to creating a welcoming culture that maximizes the powerful contributions introverts bring to the workplace. As the diversity, equity, and inclusion wave widens and deepens its reach, introversion is becoming a natural part of that movement. After all, about half the population identify as introverts, but many organizations are stuck in traditional extrovert-centric workplace cultures that reward people for speaking up publicly, expect them to log face time, and employ hiring and promotion practices rooted in the past. This ultimately discourages introverts from contributing and reaching their full talent potential, which could have a major impact on the bottom line. “Champion for introverts” Jennifer Kahnweiler offers a road map for everyone in the workplace—including leaders, human resource managers, and team members—to create inclusive, introvert-friendly cultures. Kahnweiler provides an assessment to determine how introvert friendly your organization is and looks at every aspect of organizational life—hiring, training, leading, communicating, meeting, designing workplaces, and more—through an inclusive lens. You'll discover how to make open-space offices introvert friendly, what the best practices are for encouraging introverts to participate on teams, which training techniques work best for introverts, and how to make remote positions work.

Applying intellect, insight, and intuition to promote school-wide transformation for educators through interpersonal reflection and hands-on tools. This is no one-size-fits-all approach to education that provides a formula or a practical how-to guide. The truths found in this book are about applying research-based best practices to the processes that lie outside of academia. Readers will find themselves getting out their pens and highlighters to write in the margins and apply personal reflection to the teachings. The three Is—intellect, insight, and intuition—are tools for educators to find personal growth and development inside the structure of the school system so that they can promote school-wide transformation. When educators stop fighting the system and instead look inward for the answers, they will begin to see the improved student achievement and involvement they crave. Readers will walk away with: — greater self-awareness that will improve the classroom and educational landscape around them, — improved self-appreciation that will fuel empathy in the classroom and workplace, — clarity about the origin and influence of their beliefs that will help them combat negative beliefs and take advantage of positive beliefs, and — better decision-making skills developed through a contemplative approach.

Wall Street Journal Bestseller! Next Big Idea Club selection?chosen by Malcolm Gladwell, Susan Cain, Dan Pink, and Adam Grant as one of the “two most groundbreaking new nonfiction reads of the season!” “A must-read that topples the idea that emotions don't belong in the workplace.” —Susan Cain, author of Quiet A hilarious guide to effectively expressing your emotions at the office, finding fulfillment, and defining work-life balance on your own terms. How do you stop the office grouch from ruining your day? How do you enjoy a vacation without obsessing about the unanswered emails in your inbox? If you're a boss, what should you do when your new, eager hire wants to follow you on Instagram? The modern workplace can be an emotional minefield, filled with confusing power structures and unwritten rules. We're expected to be authentic, but not too authentic. Professional, but not stiff. Friendly, but not an oversharer. Easier said than done? As both organizational consultants and regular people, we know what it's like to experience uncomfortable emotions at work – everything from mild jealousy and insecurity to panic and rage. Ignoring or suppressing what you feel hurts your health and productivity – but so does letting your emotions run wild. Our goal in this book is to teach you how to figure out which emotions to toss, which to keep to yourself, and which to express in order to be both happier and more effective. We'll share some surprising new strategies, such as: * Be selectively vulnerable: Be honest about how you feel, but don't burden others with your deepest problems. * Remember that your feelings aren't facts: What we say isn't always what we mean. In times of conflict and miscommunication, try to talk about your emotions without getting emotional. * Be less passionate about your job: Taking a chill pill can actually make you healthier and more focused. Drawing on what we've learned from behavioral economics, psychology, and our own experiences at countless organizations, we'll show you how to bring your best self (and your whole self) to work every day.

Leadership used to be about telling people to go where you sent them – now it's about persuading them to come with you. Old leaders needed to create an artificial persona of infallible authority to issue orders that were obeyed – today's leaders need to uncover their own authentic leadership personality and bring that open and honest self to conversations that bring others to willing and lasting change. To do so effectively they need to unlearn old leadership behaviours and develop totally different ones. In Leading by Coaching Nick Marson shows how. Leaders are shown how to “Look In” to develop greater self-awareness, “Look Out” to others by utilising a coaching approach, and “Look Beyond” to face uncertainty, manage adaptability and acquire resilience. Marson's approach is based on deeply researched principals, multiple social science disciplines, the latest cognitive, neurological and psychological research, and in-depth research interviews with over 20 CEOs and senior executives. It has been developed and refined over many years of practice. If leaders want to drive impactful change, they need to understand how to hold the coaching conversations that power it. They need to lead by coaching.

“The Age of Agility: Building Learning Agile Leaders and Organizations focuses on learning agility, one of the most important trends in the business world during the past decade. Some surveys have found it was the most frequently used criterion to measure leadership potential. Despite this popularity there are fundamental questions that need to be answered such as (a) What specifically is learning agility? (b) How many facets or dimensions does it have? (c) How do we measure it? and (d) Can it be developed? It appears that much of what is known about the construct of learning agility has been gleaned from its application by practitioners. While this knowledge is an extremely useful place to begin, there is an urgent need to undergird this understanding with science. The purpose of this edited book is to systematically examine the construct through a more scholarly lens. Over 50 authors - both academic researchers and talent management practitioners - have contributed to the contents. The goal is to enhance knowledge of learning agility, distilling and synthesizing scientific evidence with best practices”--
